

# The revival of Sail Cargo

TransOceanic Wind Transport has offered a concrete sail cargo service since 2011. TOWT uses cargo sailing ships to transport goods by sail power and certifies them as such with a specific label.

## Why by sail?

- ⚓ Offer an ecological alternative to conventional shipping.
- ⚓ Value sail transport along with local and organic products.
- ⚓ Dynamise the working sail fleet.
- ⚓ Develop sailing cargo ships of the future.

## The ANEMOS certificate

TOWT cargoes are all transported by sail power and ANEMOS-certified according to a maritime framework that best respects the environment by a drastic reduction of carbon emissions. Each voyage is identified by a tracking number that provides a full transparency over the shipment.

ANEMOS products have been selected for their taste, their quality and for their respect of the environment and human beings.

CONVENTIONAL SHIPPING

**90%**

of global trade, in total opacity

**4%**

of global CO<sub>2</sub> emissions (about 3 times that of the UK)

**10%**

10% of global sulphur emissions

SAIL CARGO

**100%**

quality products, in total transparency

**90%**

CO<sub>2</sub> emission less into the atmosphere, according to the routes.

**0%**

of sulphur emissions, of course!
